Fedorovskaya

# Body and Mind: A Study of Avatar Personalization in Three Virtual Worlds

Nicolas Ducheneaut, Ming-Hui  
“Don” Wen, Nicholas Yee, Greg  
— Wadley

# Realistic Self

- Want their virtual identity and real life identity to be the same
- Aim for continuity within the two worlds

---

# Idealized Self

- Create an avatar that overcomes perceived inadequacies
- The avatar will reflect their real life appearance with few changes

**YOU'RE  
TERMINATED**

# Fantasy Self

- Avatar's appearance is much different than real life appearance
  - Very few alterations
  - Continuous identity
-

# Roleplayer

- Have many avatars/identities
- Change identities for every new situation
- Each avatar may fulfill an identity need

# The Social Aspects

Your avatar determines  
your experience

# The Issues with Avatars

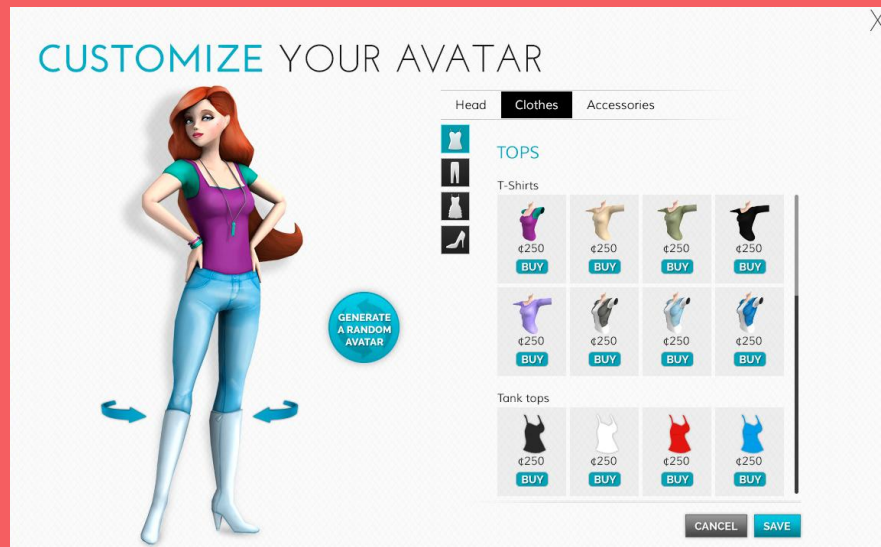

## GIRLS THAT PLAY VIDEO GAMES

- The Default Character
- Body Proportions
- Gender Affects Experience
- Gender Options in General

# Avatar Personalization

# Common Avatar Traits

- Hair colour
- Hairstyle
- Eye colour
- Height
- Body type
- Gender
- Age
- Skin colour

# The Study

- Second Life
- Maplestory
- World of Warcraft

How do virtual avatars compare to the user's offline appearance?

---

38% of players gender-swap

Older players generally create younger avatars

32% reproduce their own physical characteristics

# Identity Exploration

## Idealized Self

- Idealized versions of the self
- Features one wishes to have in reality

## Standing Out

- Avatar stands out as much as possible
- Unconventional look
- As different from the player as possible

## Following a Trend

- Avatar looks like a celebrity or particular person
- Avatar reflects a popular trend

# Hair in the Virtual World

- Malleable identity marker (hair length, colour, style)
- Visibility from third-person perspective
- Central to character's identity
- Easily recognizable

# Study Conclusions

- Avatars reinvent the body online
- Virtual worlds allow players to create idealized characters, alternate selves
- Personality characteristics are most appreciated when similar to the player
- Characters created using Western ideals
- Stereotyped vision of the human body

Virtual Worlds and Avatars in everyday life

# Questions

- In terms of gaming such as Wii Sports, for instance, what is the purpose of having a mii? (By holding the remote as a tennis racket, one's already in a first person situation- no character needed.)
- What can explain the niche for avatars in kid games, specifically?
- With the increasing popularity of VR and AR goggles, should we be concerned with the blending of real and artificial?
- According to research, most creators construct avatars who are idealized versions of themselves. Are there ideological differences between the avatars we create (in games) and our social media profiles; “virtual” life we portray online.

# Thank you!
